Appln. No. 10/004,758 Attorney Docket No. 10541-636

I. <u>Listing of Claims</u>

1. (Currently Amended): A pinion moveable along a output shaft of a starter

assembly, the pinion having comprising:

an inner surface disposed about the output shaft, the inner surface extending

to being continuous with an end face of the pinion, wherein the inner surface and the

end face are generally perpendicular with each other, the pinion comprising:

a primary edge for moving particles from the shaft as the pinion moves along

the output shaft, the primary edge being formed along a length of the inner surface

and extending to the end face, the primary edge defining a groove in which the

particles are received as the pinion moves along the output shaft, the groove being

formed along the length of the inner surface and adjacent the primary edge.

(Original): The starter pinion of claim 1 wherein the pinion is a one-piece

pinion.

3. (Original): The starter pinion of claim 1 wherein the pinion is rotatably and

linearly moveable along the output shaft.

4. (Original): The starter pinion of claim 1 wherein the output shaft is

rotatable.

Attorney Docket No. 10541-636

Appln. No. 10/004,758

5. (Original): The starter pinion of claim 1 further comprising a secondary

edge for moving the particles from the primary edge, the secondary edge being

radially formed on the end face adjacent the primary edge.

6. (Original): The starter pinion of claim 1 wherein the primary edge moves

particles from a portion on the output shaft as the pinion moves along the output

shaft.

7. (Original): The starter pinion of claim 1 wherein the primary edge is

arcuately formed along the inner surface of the pinion.

8. (Cancelled)

9. (Original): The starter pinion of claim 1 wherein the inner surface has a

plurality of primary edges formed thereon.

10. (Original): The starter pinion of claim 9 wherein the inner surface

includes a plurality of grooves, each groove being formed along the length of the

inner surface and adjacent each respective primary edge.

11. (Original): The starter pinion of claim 1 wherein the length along which

the primary edge is formed includes the entire length of the inner surface.

-3-

Attorney Docket No. 10541-636

Appln. No. 10/004,758

12. (Original): The starter pinion of claim 1 wherein the length along which

the primary edge is formed includes a portion of the length of the inner surface.

13. (Original): The starter pinion of claim 1 wherein the starter pinion is

made of a metal.

14. (Original): The starter pinion of claim 1 wherein the pinion includes a

barrel portion and a gear portion, the end face and the inner surface being adjacent

the gear portion.

15. (Currently Amended): A starter pinion moveable along an output shaft of

a starter assembly, the pinion comprising:

an inner surface having a bore formed therethrough, the inner surface being

disposed about the output shaft and extending to being continuous with an end face

of the pinion, wherein the inner surface and the end face are generally perpendicular

with each other; and

a groove for receiving and moving particles along the output shaft as the

pinion moves along the output shaft, the groove being formed along a length of the

inner surface and extending to the end face, the groove defining a primary cleaning

edge formed adjacent the groove along the length of the inner surface [[so]].

Attorney Docket No. 10541-636

Appln. No. 10/004,758

(Original): The starter pinion of claim 15 further comprising a 16.

secondary edge for moving the particles from the primary edge, the secondary edge

being radially formed on the end face adjacent the primary edge.

17. (Original): The starter pinion of claim 15 wherein the groove is arcuately

formed along the inner surface of the pinion to receive and move particles from a

portion on the output shaft as the pinion moves therealong.

18. (Cancelled)

19. (Original): The starter pinion of claim 15 wherein the inner surface has a

plurality of grooves formed thereon.

20. (Currently Amended): The starter pinion of claim 15 wherein each the

groove is formed along the length of the inner surface and adjacent each the primary

edge.

21. (Original): The starter pinion of claim 15 wherein the length along which

the groove is formed includes the entire length of the inner surface.

22-33. (Cancelled)

-5-

- (New): The starter pinion of claim 15 wherein the pinion is a one-piece 34. pinion.
 - 35. (Cancelled)
